Sterile Culture and Transport Swabs

Incorporating specialist swabs and the Probact™ range

- Probact™ Transport Systems are ideal for the safe collection, transport and preservation of microorganisms
- Comprehensive choice of swab heads and shaft materials
- Synthetic or natural swab materials available
- Supplied in medical grade plastics for sterility and quality assurance
- High performance and cost saving options available
- Sealed with tamper evident packaging
- Manufactured using non-toxic glues and binding agents for maximum organism survival
- Gamma Irradiated to Sterility Assurance Level (SAL) 10^-6 for guaranteed sterility
**Probact Transport Swabs**

Complete sampling kits for the safe collection, transport and preservation of all types of microorganisms to the laboratory. Synthetic and natural materials are available allowing the user to tailor cost and performance. TSC's Probact™ range is CE Marked, complies with the European Medical Device Directive 93/42/EEC and have a 2 year shelf life.

**Amies Clear Medium**

> CLSI M40-A2 compliant  
> Up to 24 hours survival and is ideal for microscopy  
> Recommended for general clinical swabbing of fastidious, non-fastidious and anaerobic microorganisms, including throat, vaginal and wound samples

**Amies Charcoal Medium**

> CLSI M40-A2 compliant  
> Up to 48 hours for transport, due to the addition of activated charcoal that absorbs toxic metabolites (like fatty acids) away from the sample  
> Ideal for clinically significant samples and can be used to transport most fastidious and non-fastidious microorganisms

*Products marked * should not be used for patient sampling.

Swab Bud Fibres

Cotton
A natural product that contains fatty acids for example oleic acid. These can inhibit recovery of some bacteria if not examined promptly. Sterilisation by irradiation can make this inhibitive effect worse, especially when used in a transport device. Where delay is expected viscose or polyester fibres are preferred.

Viscose
A semi-synthetic material, where the starting component is wood pulp. Ideal for general purpose transport devices. Tips preserve the sample longer (no fatty acids).

Polyester
A fully synthetic material with high absorbency. Ideal for hygiene testing with most commercial luminometer techniques.

Convenience, Safety and Security

Package seal immediately changes colour from clear to white as soon as pack is peeled open.

Tamper evident seal on all caps.

Peel Pouch packaging.

Mini-grip bags.

Breakpoint shafts.

Rackable for convenient swab storage.

Products marked ✓ are CE-marked, and meet the requirements defined in the European Medical Devices Directive EC 93/42/EEC for use as a medical device.

Individual product sheets, certificates of conformity and material safety data sheets are available on our website www.tscswabs.co.uk
### Sterile Mini Tip Swabs

## MRD Swab Sampling Kits

Maximal Recovery Diluent swab sampling kits. Suitable for microbiological examination of surfaces for multiple applications.

> Contains an isotonic diluent for maximum recovery and viability of microorganisms.

> Sample stability for up to 2 hours. Ideal for transporting non-fastidious organisms for up to 24 hours.
